Welcomes you!
To the 3 days hands-on workshop "Create your own website" using HTML+CSS and WordPress
By
Prof. Nutan Deshmukh (HTML),
Dr. Sandhya Arora (CSS),
Prof. Swati Shirsath (CSS),
Dr. Chhaya Gosavi (WordPress)

CSS
• CSS Solved a Big Problem
• HTML was NEVER intended to contain tags for formatting a web page!
• HTML was created to describe the content of a web page, like:
<h1>This is a heading</h1>
This is a paragraph.
• When tags like <font>, and color attributes were added to the HTML 3.2 specification, it started a nightmare for web developers. Development of large websites, where fonts and color information were added to every single page, became a long and expensive process.
Dr. Sandhya Arora
